- Microsoft Office
- learn any other language quickly
- Quick learning
- Work under pressure
- Team worker

Projects

- **Syria Tours App (MERN Stack)**
  A web application promoting tourism in Syria, featuring:
  • Display of famous tourist attractions.
  • Searching for the tourist attractions according to their name, the city existing in, or the sort of the attraction like natural, hotels, restaurants, etc..
  • The ability of rating the attraction and leaving a review after register and log in.
  • Online reservation system for a chosen attraction with full name, phone number, the date of reservation, and the number of the guests.
  Live Demo: https://syria-tours-app-frontend.onrender.com
  GitHub Repo: https://github.com/ibrahimzyusuf/Syria-Tours-App.git

- **Blog App (MERN Stack)**
  A fully responsive and secure blogging platform that enables users to create, manage, and interact with blog posts. Key features include:
  • Email verification and authentication for enhanced security.
  • Comprehensive dashboard for managing posts, comments, and users.
  • Category-based post organization, allowing users to filter and explore posts by specific topics.
  • Strong password policies to ensure user data protection, with the ability to reset the password when forgetting.
  Live Demo: https://blog-app-front-9dlg.onrender.com/
  GitHub Repo: https://github.com/ibrahimzyusuf/Blog-App.git

- **Store Page + Shopping Cart**
  A fully responsive, elegant and user-friendly Store page with simple, and fast Shopping Cart, using REACT, Vite, TypeScript and Sass for styling, it displays the items in a visually appealing UI, and enables the operations of the store in a very easy and fast way, it also includes a script for converting .jpg images to .webp with some compression to reduce the sizes of the images.
  Live Demo: https://ibrahimzyusuf.github.io/Store-Page/
  GitHub Repo: https://github.com/ibrahimzyusuf/Store-Page.git

- **Notes App**
  A fully responsive with simple UI Notes application for creating and managing notes quickly and efficiently, Built by REACT Vite, TypeScript, and Bootstrap for styles, You can create a new note with the desired tags, where you can select from your previous tags or add new ones, Edit the notes, the tags and delete them, and filtering the notes according to the title or the tags the note has or both of them in the Home page.
  Live Demo: https://ibrahimzyusuf.github.io/Notes-App/
  GitHub Repo: https://github.com/ibrahimzyusuf/Notes-App.git

---
